

Which one is better banana  
water or water for cilantro  
growth?

KBY and ARB

# Question

Which is better for cilantro? Banana water or normal water?

# Hypothesis

I think banana water is better because it contains nutrients for the plant.

# Experiment Design

**MATERIALS** Plastic cups, pipet, banana peel, jars, And cilantro seeds.

**SETUP** We put soil in plastic cups and planted cilantro seeds and put them on top of a brown dresser because there was a window there and there was a banana peel in the water jar.

**PROCEDURE** we put three seeds in each cup (There are 6 cups three for banana water and three for normal water) then we watered them with a pipet and three squirts in each.

# Results

Water  
----->

←---- banana  
water

# Results - Description

I watered them once every 2 days and then april 1- april 18th there was 8/9 plants from the banana water and 7/9 for the water. The highest water one was  $2 \frac{2}{3}$  inches and the banana water ones highest was  $4 \frac{1}{12}$  inches high. The average is: 2.46 inches for water and the average for banana water is 2.96 inches.

# Conclusions

Yes it was right.

That banana water not only makes them bigger but also makes more of them come out. The banana has nutrients in it.
